Any Mental Illness in Past Year	No	No	No	No	No	No	Yes	Yes	Yes
Had Serious Thoughts of Suicide in Past Year	No	No	No	No	No	No	Yes	Yes	Yes

<sup>1</sup> Estimates for these outcomes were not included in the 2002-2003 State report (Wright & Sathe, 2005), but the 2002-2003 estimates are included in the 2003-2004 State report as part of the comparison tables (see Wright & Sathe, 2006). However, the Bayesian confidence intervals associated with these were not published.

<sup>2</sup> Estimates for serious psychological distress (SPD) in the years 2002-2003 and 2003-2004 are not comparable with the 2004-2005 SPD estimates. For more details, see Section A.7 in Appendix A of the 2004-2005 State report (Wright, Sathe, & Spagnola, 2007). Note that, in 2002-2003, SPD was referred to as "serious mental illness."

<sup>3</sup> Questions used to determine a major depressive episode (MDE) were added in 2004. Note that the adult MDE estimates shown in the 2004-2005 report (Wright et al., 2007) are not comparable with the adult MDE estimates for later years.

Had Serious Thoughts of Suicide in Past Year	No	No	No	Yes	Yes	Yes

NOTE: For details on which years small area estimates are available for these outcomes, see [Table 1](#).

NOTE: Tables containing 18 or older estimates were first presented with the 2005-2006 small area estimation (SAE) tables.

<sup>1</sup> There are minor wording differences in the questions for the adult and adolescent major depressive episode (MDE) modules. Therefore, data from youths aged 12 to 17 were not combined with data from persons aged 18 or older to get an overall MDE estimate (12 or older).
